Re: Review comments on the Revision of the Lockformer Ambient Air Monitoring Program  
The Lockformer Company, Lisle, Illinois

Dear Mr. Faryan:

Weston Solutions Inc. (WESTON®) is pleased to submit the review comments on the Technical Memorandum for the Revision of the Lockformer Ambient Air Monitoring Program. The Technical Memorandum was prepared by the Clayton Group Services, Downer Grove, Illinois.

The Technical Memorandum states:

When the average ERH remediation area soil temperature reaches 50°C, two of the 17 perimeter monitoring events per week will be conducted with the Miran® SapphIRe™

When the temperatures reach 50°C the Miran® SapphIRe™ needs to be used at least once a day from Monday to Friday. If no detection is observed during the weekdays, the monitoring on the weekends with the Miran® SapphIRe™ may not be necessary. When the temperature stabilizes at 100°C and no detection is measured by Miran® SapphIRe™ then the monitoring frequency may be reduced.

Should you have any questions or require additional information, please feel free to contact me.

Very truly yours,

WESTON SOLUTIONS, INC.

Omprakash S. Patel  
Senior Project Manager
